

Stratford interchange interpretation

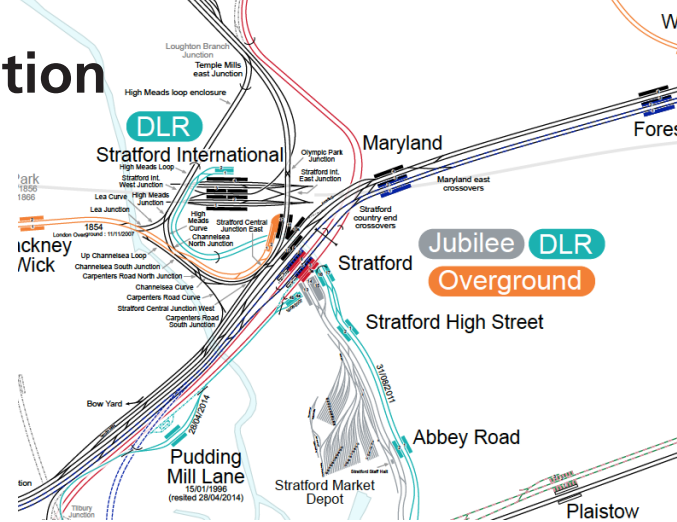

Stratford station got complicated after the arrival of London Overground, the Jubilee line and the Elizabeth line, and two branches of the DLR.

The issue : is it clear that only the Canning Town branch of the DLR goes through to Stratford International? And that the Poplar branch stops at Stratford?

X = misleading (c is completely wrong).

? = unclear to me, maybe ok or not depending on user.

Looks like you get into trouble when you don't have a blob for every line.
